

Programming Assignment: Operators

- Implement the following physical operators in the iterator model:
 - Print
 - Projection
 - Select
 - Sort
 - HashJoin
 - HashAggregation
- Optional:
 - Union
 - UnionAll
- For 2 additional points:
 - Intersect
 - IntersectAll
 - Except
 - ExceptAll
- Supported types for registers: INT64, CHAR(16)

Iterator Model Operators

Iterator Model Operators

Call `next()` on root operator (aggregation)

Iterator Model Operators

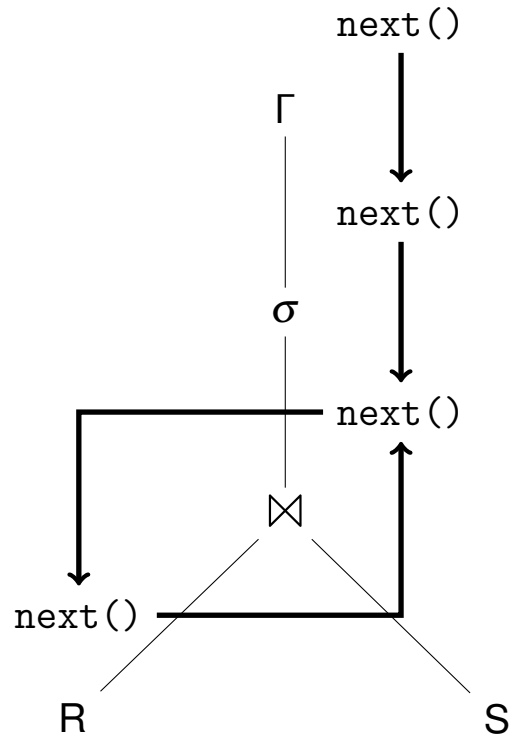

Call `next()` on selection

Iterator Model Operators

Call `next()` on hash join

Iterator Model Operators

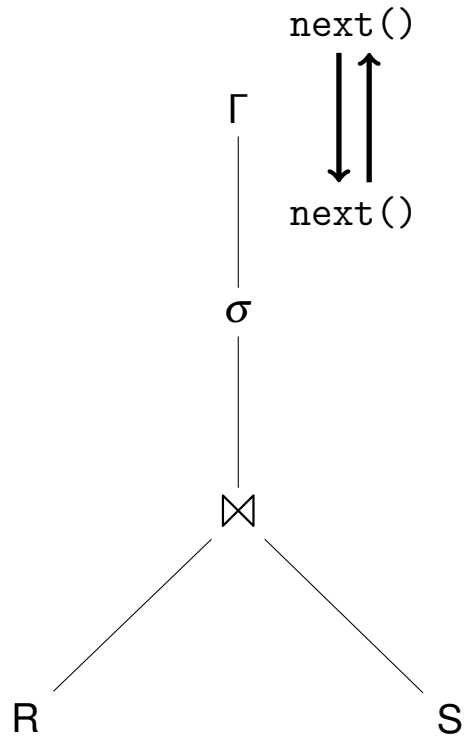

Build hash table for the left side by calling `next()` of R repeatedly

Iterator Model Operators

Call $\text{next}()$ on S , returns true as long as there are tuples left

Iterator Model Operators

Build hash table for aggregation by calling `next()` of the selection repeatedly

Iterator Model Operators

`next()`

Generate next value from the hash table
